

CONTENTS

PREFACE xvii

1

BASIC CONCEPTS 1

- 1.1 Introduction 1
 - 1.1.1 Comparison with Reinforced Concrete 2
 - 1.1.2 Economics of Prestressed Concrete 4
- 1.2 Historical Development of Prestressing 5
- 1.3 Basic Concepts of Prestressing 7
 - 1.3.1 Introduction 7
 - 1.3.2 Basic Concept Method 10
 - 1.3.3 C-Line Method 12
 - 1.3.4 Load-Balancing Method 15
- 1.4 Computation of Fiber Stresses in a Prestressed Beam by the Basic Method 19
- 1.5 C-Line Computation of Fiber Stresses 21
- 1.6 Load-Balancing Computation of Fiber Stresses 22
- 1.7 SI Working Stress Concepts 23
 - References 27
 - Problems 28

2

MATERIALS AND SYSTEMS FOR PRESTRESSING 31

- 2.1 Concrete 31
 - 2.1.1 Introduction 31
 - 2.1.2 Parameters Affecting the Quality of Concrete 31
 - 2.1.3 Properties of Hardened Concrete 32
- 2.2 Stress-Strain Curve of Concrete 36
- 2.3 Modulus of Elasticity and Change in Compressive Strength with Time 36
 - 2.3.1 High-Strength Concrete 38
 - 2.3.2 Initial Compressive Strength and Modulus 39
- 2.4 Creep 43
 - 2.4.1 Effects of Creep 45
 - 2.4.2 Rheological Models 45
- 2.5 Shrinkage 48
- 2.6 Nonprestressing Reinforcement 50
- 2.7 Prestressing Reinforcement 53
 - 2.7.1 Types of Reinforcement 53
 - 2.7.2 Stress-Relieved and Low-Relaxation Wires and Strands 54
 - 2.7.3 High-Tensile-Strength Prestressing Bars 55
 - 2.7.4 Steel Relaxation 56

- 2.7.5 Corrosion and Deterioration of Strands 58
- 2.8 ACI Maximum Permissible Stresses in Concrete and Reinforcement 59
 - 2.8.1 Concrete Stresses in Flexure 59
 - 2.8.2 Prestressing Steel Stresses 59
- 2.9 AASHTO Maximum Permissible Stresses in Concrete and Reinforcement 60
 - 2.9.1 Concrete Stresses before Creep and Shrinkage Losses 60
 - 2.9.2 Concrete Stresses at Service Load after Losses 60
 - 2.9.3 Prestressing Steel Stresses 60
 - 2.9.4 Relative Humidity Values 60
- 2.10 Prestressing Systems and Anchorages 61
 - 2.10.1 Pretensioning 61
 - 2.10.2 Post-Tensioning 62
 - 2.10.3 Jacking Systems 63
 - 2.10.4 Grouting of Post-Tensioned Tendons 64
- 2.11 Circular Prestressing 70
- 2.12 Ten Principles 70
 - References 70

PARTIAL LOSS OF PRESTRESS 73

- 3.1 Introduction 73
- 3.2 Elastic Shortening of Concrete (*ES*) 75
 - 3.2.1 Pretensioned Elements 75
 - 3.2.2 Post-Tensioned Elements 78
- 3.3 Steel Stress Relaxation (*R*) 78
 - 3.3.1 Relaxation Loss Computation 80
 - 3.3.2 ACI-ASCE Method of Accounting for Relaxation Loss 80
- 3.4 Creep Loss (*CR*) 80
 - 3.4.1 Computation of Creep Loss 82
- 3.5 Shrinkage Loss (*SH*) 83
 - 3.5.1 Computation of Shrinkage Loss 84
- 3.6 Losses Due to Friction (*F*) 85
 - 3.6.1 Curvature Effect 85
 - 3.6.2 Wobble Effect 86
 - 3.6.3 Computation of Friction Loss 87
- 3.7 Anchorage-Seating Losses (*A*) 88
 - 3.7.1 Computation of Anchorage-Seating Loss 89
- 3.8 Change of Prestress Due to Bending of a Member (Δf_{pB}) 90
- 3.9 Step-by-Step Computation of All Time-Dependent Losses in a Pre-Tension Beam 90
- 3.10 Step-by-Step Computation of All Time-Dependent Losses in a Post-Tension Beam 96
- 3.11 Lump-Sum Computation of Time-Dependent Losses in Prestress 99
- 3.12 SI Prestress Loss Expressions 100
 - 3.12.1 SI Prestress Loss Example 101
 - References 104
 - Problems 104

FLEXURAL DESIGN OF PRESTRESSED CONCRETE ELEMENTS 106

- 4.1 Introduction 106
- 4.2 Selection of Geometrical Properties of Section Components 108
 - 4.2.1 General Guidelines 108

4.2.2	Minimum Section Modulus	108
4.3	Service-Load Design Examples	115
4.3.1	Variable Tendon Eccentricity	115
4.3.2	Variable Tendon Eccentricity with No Height Limitation	122
4.3.3	Constant Tendon Eccentricity	126
4.4	Proper Selection of Beam Sections and Properties	128
4.4.1	General Guidelines	128
4.4.2	Gross Area, the Transformed Section, and the Presence of Ducts	130
4.4.3	Envelopes for Tendon Placement	130
4.4.4	Advantages of Curved or Harped Tendons	131
4.4.5	Limiting-Eccentricity Envelopes	132
4.4.6	Prestressing Tendon Envelopes	136
4.4.7	Reduction of Prestress Force Near Supports	138
4.5	End Blocks at Support Anchorage Zones	139
4.5.1	Stress Distribution	139
4.5.2	Development and Transfer Length in Pretensioned Members and Design of Their Anchorage Reinforcement	141
4.5.3	Post-Tensioned Anchorage Zones: Linear Elastic and Strut-and-Tie Theories	144
4.5.4	Design of End Anchorage Reinforcement for Post-Tensioned Beams	153
4.6	Flexural Design of Composite Beams	158
4.6.1	Unshored Slab Case	159
4.6.2	Fully Shored Slab Case	161
4.6.3	Effective Flange Width	161
4.7	Summary of Step-by-Step Trial-and-Adjustment Procedure for the Service-Load Design of Prestressed Members	162
4.8	Design of Composite Post-Tensioned Prestressed Simply Supported Section	165
4.9	Ultimate-Strength Flexural Design	178
4.9.1	Cracking-Load Moment	178
4.9.2	Partial Prestressing	179
4.9.3	Cracking Moment Evaluation	180
4.10	Load and Strength Factors	181
4.10.1	Reliability and Structural Safety of Concrete Components	181
4.11	ACI Load Factors and Safety Margins	184
4.11.1	General Principles	184
4.11.2	ACI Load Factors Equations	185
4.11.3	Design Strength vs. Nominal Strength: Strength-Reduction Factor ϕ	187
4.12	Limit State in Flexure at Ultimate Load in Bonded Members: Decompression to Ultimate Load	188
4.12.1	Introduction	188
4.12.2	The Equivalent Rectangular Block and Nominal Moment Strength	189
4.12.3	Strain Limits Method for Analysis and Design	191
4.12.4	Negative Moment Redistribution in Continuous Beams	192
4.13	Preliminary Ultimate-Load Design	202
4.14	Summary Step-by-Step Procedure for Limit at Failure Design of the Prestressed Members	204
4.15	Ultimate Strength Design of Prestressed Simply Supported Beam by Strain Compatibility	209
4.16	Strength Design of Bonded Prestressed Simply Supported Beam Using Approximate Procedures	212
4.17	SI Flexural Design Expression	216
4.17.1	SI Flexural Design of Prestressed Beams	218

5

SHEAR AND TORSIONAL STRENGTH DESIGN 223

- 5.1 Introduction 223
- 5.2 Behavior of Homogeneous Beams in Shear 224
- 5.3 Behavior of Concrete Beams as Nonhomogeneous Sections 227
- 5.4 Concrete Beams without Diagonal Tension Reinforcement 228
 - 5.4.1 Modes of Failure of Beams without Diagonal Tension Reinforcement 229
 - 5.4.2 Flexural Failure [F] 229
 - 5.4.3 Diagonal Tension Failure [Flexural Shear, FS] 229
 - 5.4.4 Shear Compression Failure [Web Shear, WS] 231
- 5.5 Shear and Principal Stresses in Prestressed Beams 232
 - 5.5.1 Flexure-Shear Strength [V_{ci}] 233
 - 5.5.2 Web-Shear Strength [V_{cw}] 236
 - 5.5.3 Controlling Values of V_{ci} and V_{cw} for the Determination of Web Concrete Strength V_c 237
- 5.6 Web-Shear Reinforcement 238
 - 5.6.1 Web Steel Planar Truss Analogy 238
 - 5.6.2 Web Steel Resistance 238
 - 5.6.3 Limitation on Size and Spacing of Stirrups 241
- 5.7 Horizontal Shear Strength in Composite Construction 242
 - 5.7.1 Service-Load Level 242
 - 5.7.2 Ultimate-Load Level 243
 - 5.7.3 Design of Composite-Action Dowel Reinforcement 245
- 5.8 Web Reinforcement Design Procedure for Shear 246
- 5.9 Principal Tensile Stresses in Flanged Sections and Design of Dowel-Action Vertical Steel in Composite Sections 249
- 5.10 Dowel Steel Design for Composite Action 250
- 5.11 Dowel Reinforcement Design for Composite Action in an Inverted T-Beam 251
- 5.12 Shear Strength and Web-Shear Steel Design in a Prestressed Beam 253
- 5.13 Web-Shear Steel Design by Detailed Procedures 256
- 5.14 Design of Web Reinforcement for a PCI Standard Double Composite T-Beam 259
- 5.15 Brackets and Corbels 263
 - 5.15.1 Shear Friction Hypothesis for Shear Transfer in Corbels 264
 - 5.15.2 Horizontal External Force Effect 266
 - 5.15.3 Sequence of Corbel Design Steps 269
 - 5.15.4 Design of a Bracket or Corbel 270
 - 5.15.5 SI Expressions for Shear in Prestressed Concrete Beams 272
 - 5.15.6 SI Shear Design of Prestressed Beams 274
- 5.16 Torsional Behavior and Strength 278
 - 5.16.1 Introduction 278
 - 5.16.2 Pure Torsion in Plain Concrete Elements 279
- 5.17 Torsion in Reinforced and Prestressed Concrete Elements 284
 - 5.17.1 Skew-Bending Theory 285
 - 5.17.2 Space Truss Analogy Theory 287
 - 5.17.3 Compression Field Theory 289
 - 5.17.4 Plasticity Equilibrium Truss Theory 293
 - 5.17.5 Design of Prestressed Concrete Beams Subjected to Combined Torsion, Shear, and Bending in Accordance with the ACI 318-99 Code 298
 - 5.17.6 SI-Metric Expressions for Torsion Equations 303
- 5.18 Design Procedure for Combined Torsion and Shear 304

- 5.19 Design of Web Reinforcement for Combined Torsion and Shear in Prestressed Beams 308
- 5.20 SI Combined Torsion and Shear Design of Prestressed Beam 317
 - References 320
 - Problems 321

6

INDETERMINATE PRESTRESSED CONCRETE STRUCTURES 324

- 6.1 Introduction 324
- 6.2 Disadvantages of Continuity in Prestressing 325
- 6.3 Tendon Layout for Continuous Beams 325
- 6.4 Elastic Analysis for Prestress Continuity 328
 - 6.4.1 Introduction 328
 - 6.4.2 Support Displacement Method 328
 - 6.4.3 Equivalent Load Method 331
- 6.5 Examples Involving Continuity 331
 - 6.5.1 Effect of Continuity on Transformation of C-Line for Draped Tendons 331
 - 6.5.2 Effect of Continuity on Transformation of C-Line for Harped Tendons 336
- 6.6 Linear Transformation and Concordance of Tendons 338
 - 6.6.1 Verification of Tendon Linear Transformation Theorem 339
 - 6.6.2 Concordance Hypotheses 342
- 6.7 Ultimate Strength and Limit State at Failure of Continuous Beams 342
 - 6.7.1 General Considerations 342
 - 6.7.2 Moment Redistribution 345
- 6.8 Tendon Profile Envelope and Modifications 346
- 6.9 Tendon and C-Line Location in Continuous Beams 346
- 6.10 Tendon Transformation to Utilize Advantages of Continuity 357
- 6.11 Design for Continuity Using Nonprestressed Steel at Support 362
- 6.12 Indeterminate Frames and Portals 363
 - 6.12.1 General Properties 363
 - 6.12.2 Forces and Moments in Portal Frames 366
 - 6.12.3 Application to Prestressed Concrete Frames 370
 - 6.12.4 Design of Prestressed Concrete Bonded Frame 373
- 6.13 Limit Design (Analysis) of Indeterminate Beams and Frames 385
 - 6.13.1 Method of Imposed Rotations 386
 - 6.13.2 Determination of Plastic Hinge Rotations in Continuous Beams 389
 - 6.13.3 Rotational Capacity of Plastic Hinges 392
 - 6.13.4 Computation of Available Rotational Capacity 395
 - 6.13.5 Check for Plastic Rotation Serviceability 396
 - 6.13.6 Transverse Confining Reinforcement for Seismic Design 397
 - 6.13.7 Selection of Confining Reinforcement 398
- References 399
- Problems 401

7

CAMBER, DEFLECTION, AND CRACK CONTROL 402

- 7.1 Introduction 402
- 7.2 Basic Assumptions in Deflection Calculations 403
- 7.3 Short-Term (Instantaneous) Deflection of Uncracked and Cracked Members 404
 - 7.3.1 Load-Deflection Relationship 404
 - 7.3.2 Uncracked Sections 407

7.3.3	Cracked Sections	411
7.4	Short-Term Deflection at Service Load	417
7.4.1	Example 7.3 Non-Composite Uncracked Double T-Beam Deflection	417
7.5	Short-Term Deflection of Cracked Prestressed Beams	423
7.5.1	Short-Term Deflection of the Beam in Example 4.3 if Cracked	423
7.6	Construction of Moment-Curvature Diagram	424
7.7	Long-Term Effects on Deflection and Camber	430
7.7.1	PCI Multipliers Method	430
7.7.2	Incremental Time-Steps Method	432
7.7.3	Approximate Time-Steps Method	434
7.7.4	Computer Methods for Deflection Evaluation	436
7.7.5	Deflection of Composite Beams	436
7.8	Permissible Limits of Calculated Deflection	437
7.9	Long-Term Camber and Deflection Calculation by the PCI Multipliers Method	438
7.10	Long-Term Camber and Deflection Calculation by the Incremental Time-Steps Method	442
7.11	Long-Term Camber and Deflection Computation by the Approximate Time-Steps Method	453
7.12	Long-Term Deflection of Composite Double-T Cracked Beam	456
7.13	Cracking Behavior and Crack Control in Prestressed Beams	463
7.13.1	Introduction	463
7.13.2	Mathematical Model Formulation for Serviceability Evaluation	463
7.13.3	Expressions for Pretensioned Beams	464
7.13.4	Expressions for Post-Tensioned Beams	465
7.13.5	ACI New Code Provisions	467
7.13.6	Long-Term Effects on Crack-Width Development	468
7.13.7	Tolerable Crack Widths	469
7.14	Crack Width and Spacing Evaluation in Pretensioned T-Beam Without Mild Steel	469
7.15	Crack Width and Spacing Evaluation in Pretensioned T-Beam Containing Nonprestressed Steel	470
7.16	Crack Width and Spacing Evaluation in Pretensioned I-Beam Containing Nonprestressed Mild Steel	471
7.17	Crack Width and Spacing Evaluation for Post-tensioned T-Beam Containing Nonprestressed Steel	472
7.18	Crack Control by ACI Code Provisions	474
7.19	SI Deflection and Cracking Expressions	474
7.20	SI Deflection Control	475
7.21	SI Crack Control	480

PRESTRESSED COMPRESSION AND TENSION MEMBERS 484

8.1	Introduction	484
8.2	Prestressed Compression Members: Load-Moment Interaction in Columns and Piles	485
8.3	Strength Reduction Factor ϕ	491
8.4	Operational Procedure for the Design of Nonslender Prestressed Compression Members	492
8.5	Construction of Nominal Load-Moment (P_n-M_n) and Design (P_u-M_u) Interaction Diagrams	493
8.6	Limit State at Buckling Failure of Slender (Long) Prestressed Columns	499

- 8.6.1 Buckling Considerations 503
- 8.7 Moment Magnification Method: First-Order Analysis 504
 - 8.7.1 Moment Magnification in Non-Sway Frames 505
 - 8.7.2 Moment Magnification in Sway Frames 506
- 8.8 Second-Order Frame Analysis and $P - \Delta$ Effects 507
- 8.9 Operational Procedure and Flowchart for the Design of Slender Columns 509
- 8.10 Design of Slender (Long) Prestressed Column 509
- 8.11 Compression Members in Biaxial Bending 515
 - 8.11.1 Exact Method of Analysis 515
 - 8.11.2 Load Contour Method of Analysis 516
 - 8.11.3 Step-by-Step Operational Procedure for the Design of Biaxially Loaded Columns 519
- 8.12 Practical Design Considerations 521
 - 8.12.1 Longitudinal or Main Reinforcement 521
 - 8.12.2 Lateral Reinforcement for Columns 521
- 8.13 Reciprocal Load Method for Biaxial Bending 524
- 8.14 Modified Load Contour Method for Biaxial Bending 526
 - 8.14.1 Design of Biaxially Loaded Prestressed Concrete Column by the Modified Load Contour Method 526
- 8.15 Prestressed Tension Members 528
 - 8.15.1 Service-Load Stresses 528
 - 8.15.2 Deformation Behavior 530
 - 8.15.3 Decompression and Cracking 531
 - 8.15.4 Limit State at Failure and Safety Factors 531
- 8.16 Suggested Step-by-Step Procedure for the Design of Tension Members 532
- 8.17 Design of Linear Tension Members 532

TWO-WAY PRESTRESSED CONCRETE FLOOR SYSTEMS 538

- 9.1 Introduction: Review of Methods 538
 - 9.1.1 The Semielastic ACI Code Approach 541
 - 9.1.2 The Yield-Line Theory 541
 - 9.1.3 The Limit Theory of Plates 541
 - 9.1.4 The Strip Method 541
 - 9.1.5 Summary 542
- 9.2 Flexural Behavior of Two-Way Slabs and Plates 542
 - 9.2.1 Two-Way Action 542
 - 9.2.2 Relative Stiffness Effects 542
- 9.3 The Equivalent Frame Method 543
 - 9.3.1 Introduction 543
 - 9.3.2 Limitations of the Direct Design Method 544
 - 9.3.3 Determination of the Statical Moment M_0 545
 - 9.3.4 Equivalent Frame Analysis 547
 - 9.3.5 Pattern Loading of Spans 550
- 9.4 Two-Directional Load Balancing 551
- 9.5 Flexural Strength of Prestressed Plates 553
 - 9.5.1 Design Moments M_u 553
- 9.6 Bending of Prestressing Tendons and Limiting Concrete Stresses 556
 - 9.6.1 Distribution of Prestressing Tendons 556
 - 9.6.2 Limiting Concrete Tensile Stresses at Service Load 557
- 9.7 Load-Balancing Design of a Single-Panel Two-Way Floor Slab 561

- 9.8 One-Way Slab Systems 566
- 9.9 Shear-Moment Transfer to Columns Supporting Flat Plates 567
 - 9.9.1 Shear Strength 567
 - 9.9.2 Shear-Moment Transfer 567
 - 9.9.3 Deflection Requirements for Minimum Thickness: An Indirect Approach 570
- 9.10 Step-by-Step Trial-and-Adjustment Procedure for the Design of a Two-Way Prestressed Slab and Plate System 571
- 9.11 Design of Prestressed Post-Tensioned Flat-Plate Floor System 576
- 9.12 Direct Method of Deflection Evaluation 593
 - 9.12.1 The Equivalent Frame Approach 593
 - 9.12.2 Column and Middle Strip Deflections 594
- 9.13 Deflection Evaluation of Two-Way Prestressed Concrete Floor Slabs 597
- 9.14 Yield-Line Theory for Two-Way-Action Plates 600
 - 9.14.1 Fundamental Concepts of Hinge-Field Failure Mechanisms in Flexure 601
 - 9.14.2 Failure Mechanisms and Moment Capacities of Slabs of Various Shapes Subjected to Distributed or Concentrated Loads 606
- 9.15 Yield-Line Moment Strength of a Two-Way Prestressed Concrete Plate 612

SEISMIC DESIGN OF PRESTRESSED CONCRETE STRUCTURES 806

- 13.1 Introduction: Mechanism of Earthquakes 806
 - 13.1.1 Earthquake Ground Motion Characteristics 808
 - 13.1.2 Fundamental Period of Vibration 809
 - 13.1.3 Design Philosophy 810
- 13.2 Spectral Response Method 811
 - 13.2.1 Spectral Response Acceleration Maps 811
 - 13.2.2 Design Parameters 811
 - 13.2.3 Earthquake Design Load Classifications 815
 - 13.2.4 Redundancy 817
 - 13.2.5 General Procedure Response Spectrum 817
- 13.3 Equivalent Lateral Force Method 819
 - 13.3.1 Horizontal Base Shear 819
 - 13.3.2 Vertical Distribution of Forces 822
 - 13.3.3 Horizontal Distribution of Story Shear V_x 822
 - 13.3.4 Rigid and Flexible Diaphragms 823
 - 13.3.5 Torsion 823
 - 13.3.6 Story Drift and the P-Delta Effect 823
 - 13.3.7 Overturning 825
 - 13.3.8 Simplified Analysis Procedure for Seismic Design of Buildings 825
 - 13.3.9 Other Aspects in Seismic Design 826
- 13.4 Seismic Shear Forces in Beams and Columns of a Frame: Strong Column-Weak Beam Concept 826
 - 13.4.1 Probable Shears and Moments 826
 - 13.4.2 Strong Column Weak Beam Concept 828
- 13.5 ACI Confining Reinforcements for Structural Concrete Members 829
 - 13.5.1 Longitudinal Reinforcement in Compression Members 829
 - 13.5.2 Transverse Confining Reinforcement 831
 - 13.5.3 Horizontal Shear at the Joint of Beam-Column Connections 832
 - 13.5.4 Development of Reinforcement 834
 - 13.5.5 Allowable Shear Stresses in Structural Walls, Diaphragms, and Coupling Beams 834
- 13.6 Seismic Design Concepts in High Rise Buildings and Other Structures 837
 - 13.6.1 General Concepts 837
 - 13.6.2 Ductility of Elements and Plastic Hinging 838
 - 13.6.3 Durability Demand Due to Drift Effect 840
- 13.7 Structural Systems in Seismic Zones 840
 - 13.7.1 Structural Ductile Frames 840
 - 13.7.2 Dywidag Ductile Beam-Column Connection: DDC Assembly 844
 - 13.7.3 Structural Walls in High Seismicity Zones (Shear Walls) 844
 - 13.7.4 Unbonded Precast Post-Tensioned Walls 848
- 13.8 Dual Systems 849

- 13.9 Design Procedure for Earthquake-Resistant Structures 852
- 13.10 SI Seismic Design Expressions 856
- 13.11 Seismic Base Shear and Lateral Forces and Moments by the IBC Approach 859
- 13.12 Seismic Shear Wall Design and Detailing 862
- 13.13 Example 13.3 Structural Precast Wall Base Connection Design 867
- 13.14 Design of Precast Prestressed Ductile Frame Connection in a High Rise Building in High-Seismicity Zone Using Dywidag Ductile Connection Assembly (DDC) 870
- 13.15 Design of Precast Prestressed Ductile Frame Connection in a High-Rise Building in High-Seismicity Zone Using a Hybrid Connector System 875
